

THE ROYAL
SOCIETY
OF EDINBURGH

**RSE Christmas Lecture at
Lochaber High School, Fort William**
Wednesday 16 December 2009 Time 7.00pm

Facing up to Climate Change

Professor Paul Jowitt FRSE, Director of the Scottish Institute for Sustainable Technology, Heriot-Watt University and President of the Institution of Civil Engineers

The debate is over - it's happening. Climate change is real. but what will it mean? What are the challenges? What do we need to do? And who should be doing it? To tackle the looming crisis, 21st Century engineers will be required to re-engineer existing infrastructure and provide first-time infrastructure at a global scale. And simultaneously reduce carbon emissions by up to 80%.

So now is the time ...for an engineering renaissance, for a golden era of engineering to take us safely through the rest of this century and beyond.

**Open to all and free to attend/
Registration required**
